Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

In a user registration system, there is a requirement to implement a username validation module. Users attempting to register must adhere to specific criteria for their usernames to be considered valid.

Your task is to develop a program that takes user input for a desired username and validates it according to the following rules:

The username must not contain any spaces. The username must be at least 5 characters long.

Implement a custom exception, `InvalidUsernameException`, to handle cases where the entered username does not meet the specified criteria.

Input Format

The input consists of a string S, representing the desired username.

Output Format

If the username is valid, print "Username is valid: [S]".

If the username is invalid:

1. If the username is short, print "Invalid Username: Username must be at least 5 characters long"
2. If the username contains spaces, print "Invalid Username: Username cannot contain spaces"

Refer to the sample output for formatting specifications.

Sample Test Case

Input: John

Output: Invalid Username: Username must be at least 5 characters long

Answer

// You are using Java

```
import java.util.Scanner;
```

```
class InvalidUsernameException extends Exception {  
    public InvalidUsernameException(String s) {  
        super(s);  
    }  
}
```

```
class Main {  
    public static void name(String s) throws InvalidUsernameException {  
        int l = s.length();  
        if (l < 5) {  
            throw new InvalidUsernameException("Username must be at least 5  
characters long");  
        } else {  
            for (int i = 0; i < l; i++) {  
                if (s.charAt(i) == ' ') {  
                    throw new InvalidUsernameException("Username cannot contain  
spaces");  
                }  
            }  
        }  
    }  
}
```

```
    }  
    }  
    System.out.print("Username is valid: " + s);  
    }  
}
```

```
public static void main(String[] args) {  
    try {  
        Scanner sc = new Scanner(System.in);  
        String s = sc.nextLine();  
        name(s);  
    } catch (InvalidUsernameException e) {  
        System.out.print("Invalid Username: " + e.getMessage());  
    }  
}
```

Status : Correct

Marks : 10/10
